Facilitator guide

Keep this to yourself: it lists the decoys.

Printing

- A4 in colour, at 100% / actual size (not 'fit to page'): building blocks are 90 mm wide.
- Participants cut the building blocks out along the dashed grey lines.
- baseplates_A0.pdf: once, on A0 at 100%. Cut out the 8 Encounter baseplates, one per group.
- Per group: a table at least 1.2 m wide. The template is built up from the baseplate.
- ckm_desk.pdf: once per group, for the CKM desk: the CKM pile and the exercise 2 write-on blocks.
- Hand out the archetype plates first (exercise 0), the building block pages after exercise 0.

participant_handouts.pdf

Assignment (p. 1–4): one per participant, double-sided. The rest (p. 5–14): once per group.

Assignment p. 1–4
Exercises and the paper forms

Template structure p. 5
5 Ad hoc heading plates (SECTION), one labelled Vital signs; the baseplates are on the A0 sheet

Archetype plates p. 6–7
All plates, template archetypes and decoys mixed: hand out first, for exercise 0

Building blocks p. 8–13
Two archetypes per sheet: hand out after exercise 0

Template override stickers p. 14
Cardinality and rename stickers: yellow means changed in the template

facilitator_handouts.pdf

Once: guide, answer key, worked example and the exercise 2 answers.

Answer key p. 2–3
What each group should end up with, per exercise

Worked example p. 4
The answer built on the baseplate (landscape)

Exercise 2 answer building blocks p. 5
The filled-in Inpatient admission details

Building block colours

- **Ad hoc heading** — Section in Light Bluish Gray
- **Adverse reaction risk** — Evaluation in Bright Orange
- **Body Mass Index (BMI)** — Observation in Dark Orange — DECOY
- **Body weight** — Observation in Bright Red
- **Encounter** — Composition in Bright Green
- **Inpatient admission details** — Admin Entry in Black
- **Problem/Diagnosis** — Evaluation in Medium Azure
- **Story/History** — Observation in Medium Lavender
- **Adverse reaction event** — Cluster in Bright Blue
- **Blood pressure** — Observation in Lime
- **Body temperature** — Observation in Reddish Brown — DECOY
- **Clinical Frailty Scale (CFS)** — Observation in Dark Bluish Gray
- **Height/Length** — Observation in Dark Blue
- **Medication order** — Instruction in Magenta
- **Respiration** — Observation in Coral — DECOY

Answer key

Based on the Nursing Admission Assessment COMPLETE template

Exercise 0: Archetypes

Structure	Main diagnosis, Patient history and Frailty straight on the Encounter baseplate, without a heading: the (renamed) archetype is the heading. Ad hoc headings: **Vital signs** (three archetypes stacked on it), **Allergies** and **Medications** (a heading for a repeating list, 0..*). Two of the five heading plates stay unused. The worked example shows it built.
Main diagnosis	**Problem/Diagnosis** (EVALUATION).
Patient history	**Story/History** (OBSERVATION).
Allergies	**Adverse reaction risk** (EVALUATION), with **Adverse reaction event** (CLUSTER) for the reaction.
Medications	**Medication order** (INSTRUCTION): in openEHR a current medication list is built from medication orders, also for medication prescribed elsewhere. Discussion point: the 'Medication use statement' (OBSERVATION.medication_statement) fits 'medication used at admission' better, but is still an unpublished draft on CKM.
Vital signs	**Height/Length**, **Body weight**, **Blood pressure**.
Frailty	**Clinical Frailty Scale (CFS)** from the CKM desk.
Decoys	Respiration and Body temperature (vital signs, not on the form), Body Mass Index (derived from height and weight).
Cardinality	Adverse reaction risk **0..*** and Medication order **0..***: several allergies or medications. The rest 0..1. Adverse reaction event 0..1 in its slot.

Exercise 1: Elements

1.1 Main diagnosis	Plate renamed **Main Diagnosis**; keep **Problem/Diagnosis name**.
1.2 Other parts	Story/History: **Story**. Medication order: **Medication item**. Height/Length: **Height/Length**. Body weight: **Weight**. Blood pressure: **Systolic** and **Diastolic**, both **1..1**.
1.2 Optional renames	The template renames to the form's labels: plate Story/History to **Patient History**; elements Story to **Patient's story**, Medication item to **Name**, Height/Length to **Height**. Other names that match the form are fine too. No rename where only the capital letters differ (Blood pressure).
1.3 Allergies	Keep **Substance**, renamed **Allergy**. Adverse reaction event on the slot block **Reaction event summary**, which goes on the left so the CLUSTER plate can hang over Patient History. Keep **Manifestation**, renamed **Reaction**, **1..1**. The cluster itself stays 0..1, so an allergy without a recorded reaction is still possible.

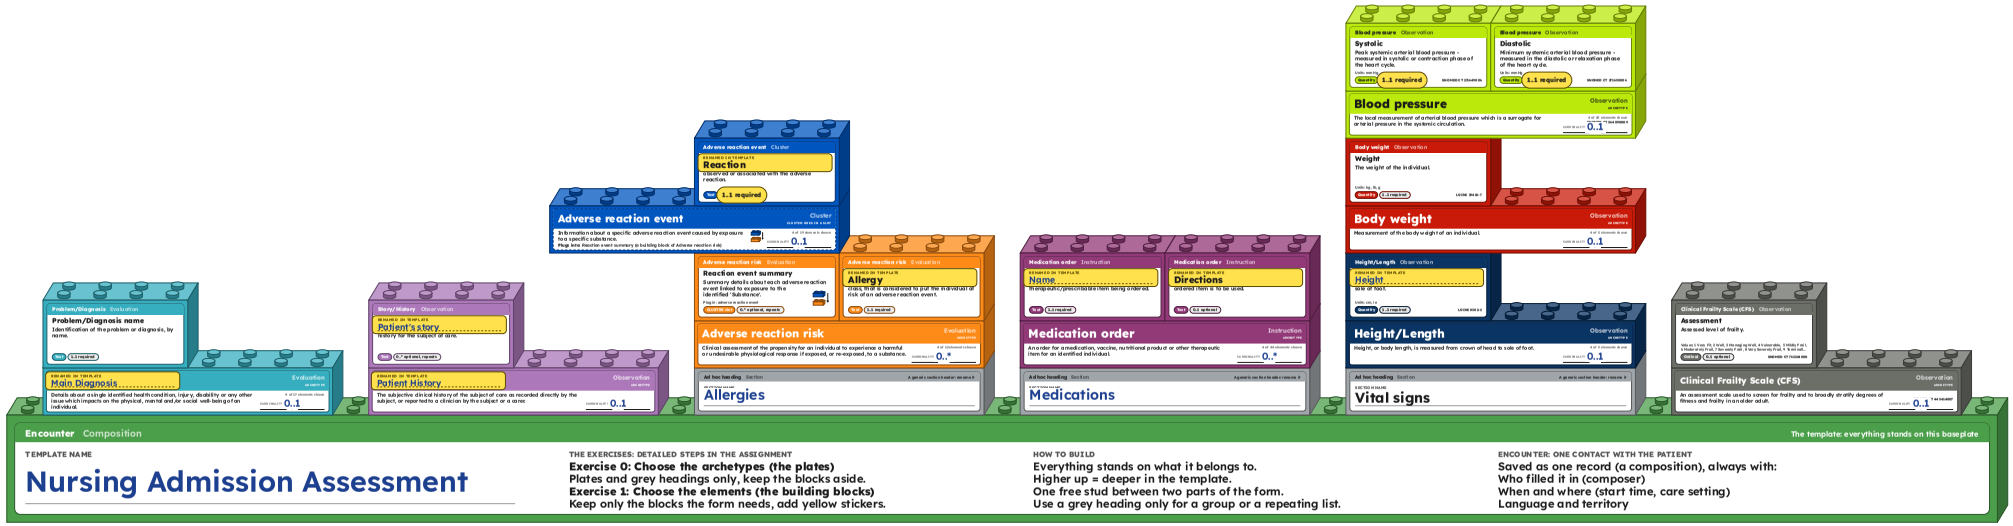

1.4 Medication directions	Medication order: **Overall directions description**, renamed **Directions**. Tempting but wrong: Specific directions description (one part of the directions), Parsable directions (a computable syntax for systems).
1.5 Frailty	Clinical Frailty Scale: keep **Assessment** (an ordinal, 1 Very Fit to 9 Terminally Ill).

Exercise 2: Inpatient admission details (ADMIN_ENTRY)

Mode of access	Coded text, with free text allowed for 'Other'. 0..1.
Transported with	Coded text, with free text for 'Other'. **0..***: more than one can apply.
Admission method	Coded text. 0..1.
Additional help needed	Boolean, or coded text Yes/No. 0..1.
Placement	Straight on the Encounter, no section needed (not built on the baseplate). Cardinality on the plate: 0..1.

The filled-in building blocks are on the last page of this document.

Worked example: the answer on the baseplate

The parts of the form side by side, one stud apart, from left to right: Main Diagnosis, Patient History, Allergies, Medications, Vital signs, Frailty.

Everything stands on what it belongs to: blocks on their archetype, archetypes on a heading or on the baseplate, the CLUSTER on its slot block.

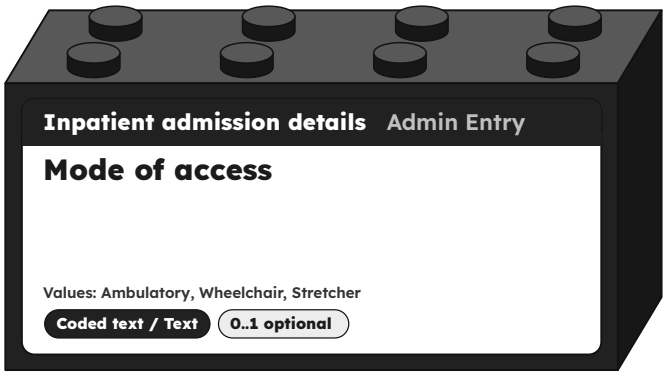

The slot block goes on the left of the allergy plate, so the CLUSTER plate can overhang above Patient History.

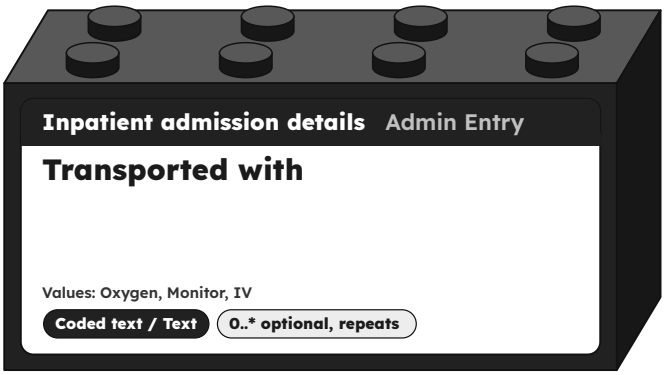

Vital signs: one heading; Height, Weight and Blood pressure each stand on the blocks of the one below.

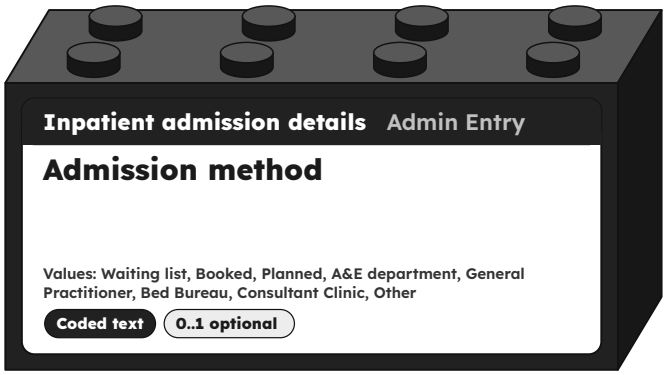

Yellow stickers: the renames of plates and elements (blue ones written on blank stickers) and 1..1 for Reaction, Systolic and Diastolic.
