Facilitator guide

Keep this to yourself: it lists the decoys.

Printing

- A4 in colour, at 100% / actual size (not 'fit to page'): building blocks are 90 mm wide.
- Participants cut the building blocks out along the dashed grey lines.
- Per group: a flipchart sheet and tape. It is the baseplate: the template is built on it.
- Hand out the archetype plates first (exercise 0), the building block pages after exercise 0.

participant_handouts.pdf

Assignment (p. 1–4): one per participant, double-sided. The rest (p. 5–19): once per group.

Assignment — **p. 1–4**
Exercises and the paper forms

Template structure — **p. 5**
Encounter baseplate (COMPOSITION) and 5 write-on Ad hoc heading strips (SECTION)

Archetype plates — **p. 6–7**
All plates, template archetypes and decoys mixed: hand out first, for exercise 0

Building blocks — **p. 8–18**
One sheet per archetype: hand out after exercise 0

Template override stickers — **p. 19**
Cardinality and rename stickers: yellow means changed in the template

facilitator_handouts.pdf

Guide, answer key and answer blocks once; write-on blocks and CKM pile once per group.

Answer key — **p. 2–3**
What each group should end up with, per exercise

Write-on building blocks — **p. 4**
Black plate and blank building blocks: hand out when a group starts exercise 2

CKM pile — **p. 5**
Clinical Frailty Scale: the plate for exercise 0, the building block for exercise 1

Exercise 2 answer building blocks — **p. 6**
The filled-in Inpatient admission details

Building block colours

- **Ad hoc heading** — Section in Light Bluish Gray
- **Adverse reaction event** — Cluster in Bright Blue
- **Adverse reaction risk** — Evaluation in Bright Orange
- **Blood pressure** — Observation in Lime
- **Body Mass Index (BMI)** — Observation in Dark Orange — **DECOY**
- **Body temperature** — Observation in Reddish Brown — **DECOY**
- **Body weight** — Observation in Bright Red
- **Clinical Frailty Scale (CFS)** — Observation in Dark Bluish Gray
- **Encounter** — Composition in Bright Green
- **Height/Length** — Observation in Dark Blue
- **Inpatient admission details** — Admin Entry in Black
- **Medication order** — Instruction in Magenta
- **Problem/Diagnosis** — Evaluation in Medium Azure
- **Respiration** — Observation in Coral — **DECOY**
- **Story/History** — Observation in Medium Lavender

Answer key

Based on the Nursing Admission Assessment COMPLETE template

Exercise 0: Archetypes

Structure	Main diagnosis, Patient history and Frailty straight on the Encounter, without a heading: the (renamed) archetype is the heading. Ad hoc headings: **Vital signs** (groups three archetypes), **Allergies** and **Medications** (one heading above a repeating list, 0..*). Two of the five strips stay unused.
Main diagnosis	**Problem/Diagnosis** (EVALUATION).
Patient history	**Story/History** (OBSERVATION).
Allergies	**Adverse reaction risk** (EVALUATION), with **Adverse reaction event** (CLUSTER) for the reaction.
Medications	**Medication order** (INSTRUCTION): in openEHR a current medication list is built from medication orders, also for medication prescribed elsewhere. Discussion point: the 'Medication use statement' (OBSERVATION.medication_statement) fits 'medication used at admission' better, but is still an unpublished draft on CKM.
Vital signs	**Height/Length**, **Body weight**, **Blood pressure**.
Frailty	**Clinical Frailty Scale (CFS)** from the CKM desk.
Decoys	Respiration and Body temperature (vital signs, not on the form), Body Mass Index (derived from height and weight).
Cardinality	Adverse reaction risk **0..*** and Medication order **0..***: several allergies or medications. The rest 0..1. Adverse reaction event 0..1 in its slot.

Exercise 1: Elements

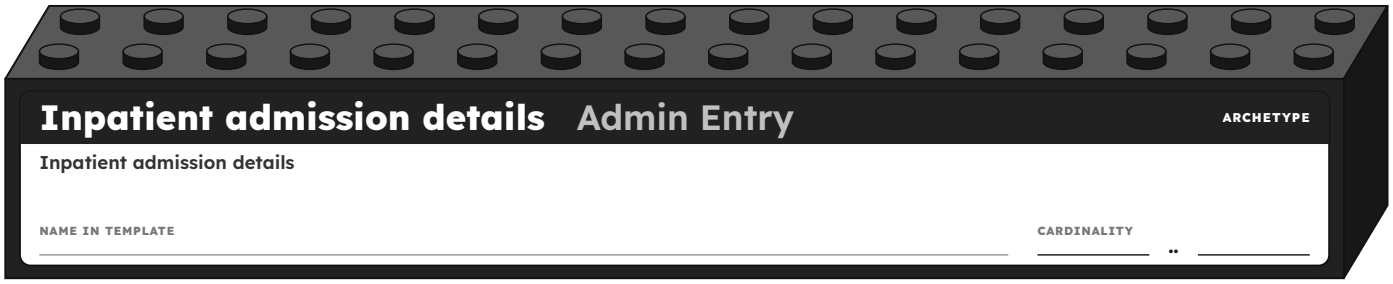

1.1 Main diagnosis	Plate renamed **Main Diagnosis**; keep **Problem/Diagnosis name**.
1.2 Other parts	Story/History: **Story**. Medication order: **Medication item**. Height/Length: **Height/Length**. Body weight: **Weight**. Blood pressure: **Systolic** and **Diastolic**, both **1..1**.
1.2 Optional renames	The template renames to the form's labels: plates Story/History to **Patient History** and Blood pressure to **Blood Pressure**; elements Story to **Patient's story**, Medication item to **Name**, Height/Length to **Height**. Other names that match the form are fine too.
1.3 Allergies	Keep **Substance**, renamed **Allergy**. Adverse reaction event in the slot **Reaction event summary**. Keep **Manifestation**, renamed **Reaction**, **1..1**. The cluster itself stays 0..1, so an allergy without a recorded reaction is still possible.
1.4 Medication directions	Medication order: **Overall directions description**, renamed **Directions**. Tempting but wrong: Specific directions description (one part of the directions), Parsable directions (a computable syntax for systems).

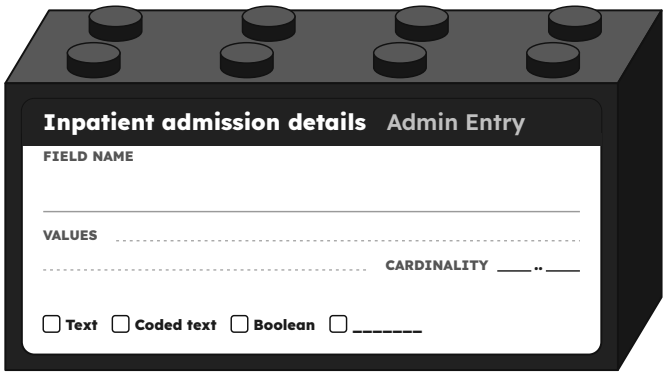

1.5 Frailty	Clinical Frailty Scale: keep **Assessment** (an ordinal, 1 Very Fit to 9 Terminally Ill).

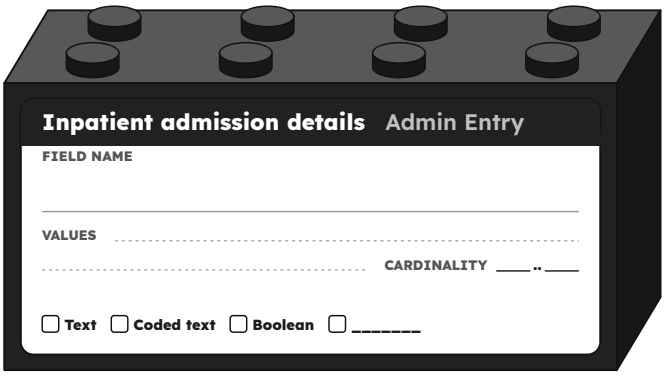

Exercise 2: Inpatient admission details (ADMIN_ENTRY)

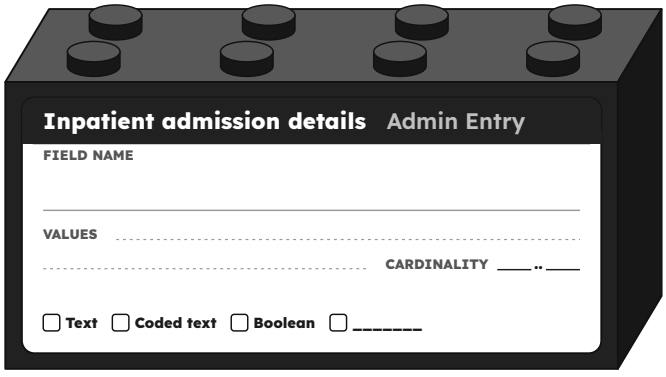

Mode of access	Coded text, with free text allowed for 'Other'. 0..1.
Transported with	Coded text, with free text for 'Other'. **0..***: more than one can apply.
Admission method	Coded text. 0..1.
Additional help needed	Boolean, or coded text Yes/No. 0..1.
Placement	Straight on the Encounter, no section needed. Cardinality on the plate: 0..1.

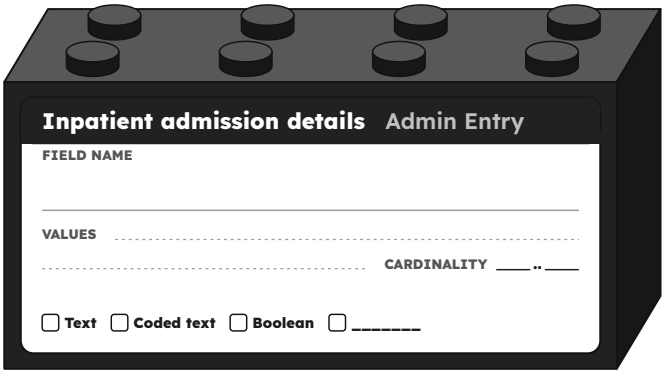

The filled-in building blocks are on the last page of this document.

✂ cut along the dashed lines

Clinical Frailty Scale (CFS) Observation

ARCHETYPE

An assessment scale used to screen for frailty and to broadly stratify degrees of fitness and frailty in an older adult.

SNOMED CT 445414007

NAME IN TEMPLATE

CARDINALITY ..

Clinical Frailty Scale (CFS) Observation

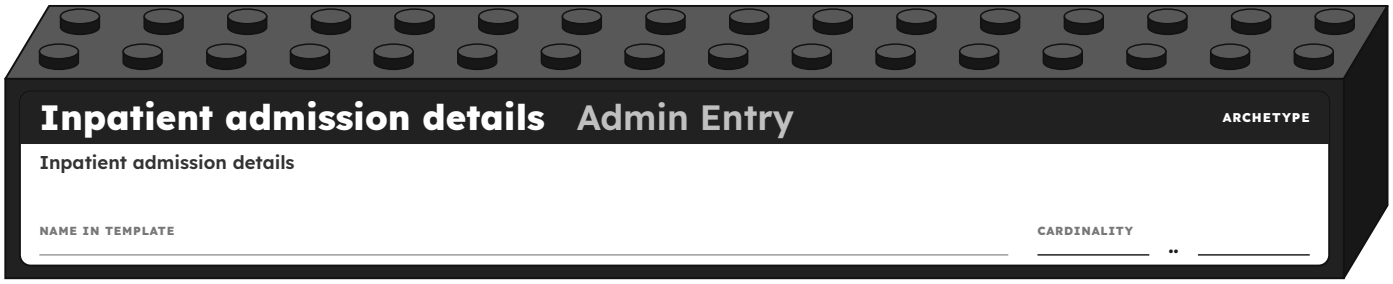

Assessment

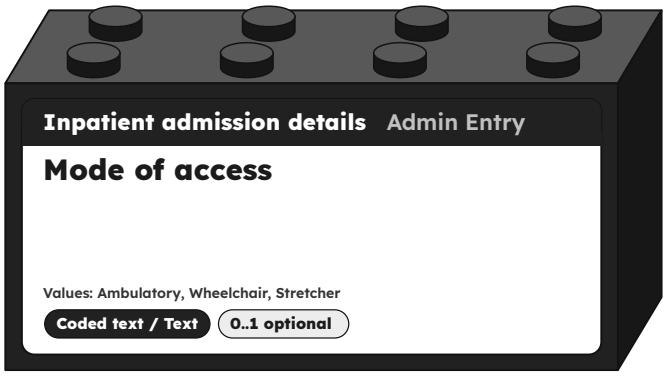

Assessed level of frailty.

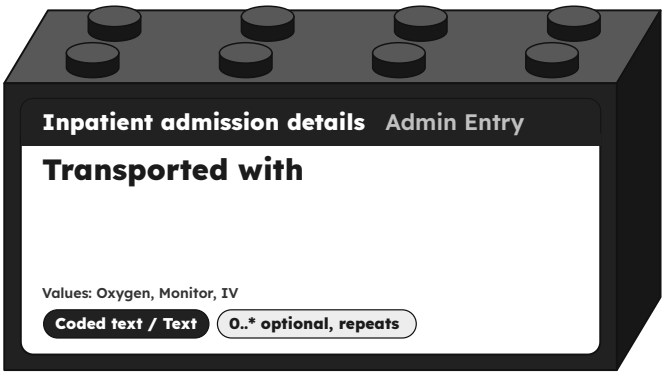

Values: 1 Very Fit, 2 Well, 3 Managing Well, 4 Vulnerable, 5 Mildly Frail, 6 Moderately Frail, 7 Severely Frail, 8 Very Severely Frail, 9 Terminally Ill

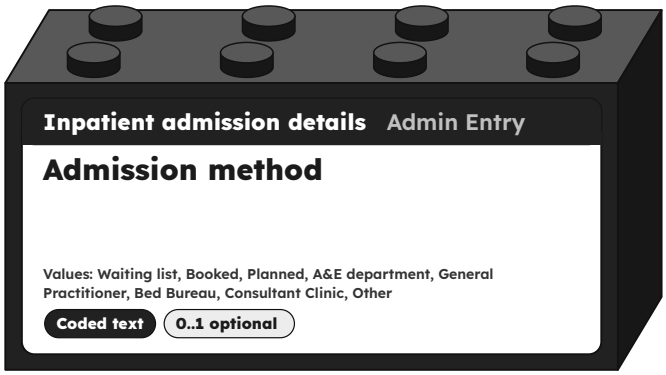

Ordinal | 0..1 optional
